Services offered by International Oilfield Management Services Group of Companies

The International Oilfield Management Services group of companies is located in Calgary, Alberta and operates primarily in Western Canada. We are the world's largest integrated asset acquisition, management and recovery solutions provider in the oil and gas industry, and can help with all your oil and gas equipment needs.

Through our various divisions we provide:

- A. Oilfield equipment and drilling materials (casing, wellheads, float equipment and production tubing) and services
- B. Production and processing equipment acquisition and disposition services
- C. Inventory, management, valuation and redeployment services
- D. Equipment appraisal services
- E. Supply chain services
- F. Equipment financing services

We incorporate industry best practices in full cycle asset recovery into our processes to ensure we eliminate personal bias and provide only objective findings that will withstand stakeholder scrutiny. We follow a proven, sustainable, repeatable, scalable and defensible methodology for project scoping, definitions, data collection, valuation, asset management, internal redeployment and external sales.

We can assist with sizing, design and feature suggestions for the oil and gas production assets your company may require. We also provide complete supply chain services, including review of your existing idle and surplus assets for redeployment. If no existing assets are suitable for the required project we will then review surplus assets from other owners, and, if required, we will source new equipment via bidding, bid evaluation, suggested vendors, and vendor evaluation services for your procurement requirements.
